

# ProspectCity

## Hardware

Multi-processor, multi-drive, hot-swappable units

## Hosting

Top-tier providers (including IBM & Sun-owned facilities) in Chicago, Schaumburg, Minneapolis and Los Angeles.

## Operating System

OpenBSD-based systems (no MS Windows-based systems) Open Source systems provide maximum DR capability

## Software/Code

Ruby, Ruby on Rails, ActiveX, HTML (Open Source). Open Source eliminates licensing and dependency on a "mother ship" to provide updates/fixes.

## No VPN Needed

Internet accessible systems (Velvet, Email, Web, IM, VOIP, IM, etc.) mean our clients do not need locally-hosted equipment or a costly VPN.

## Any Computer will Work

Access is not restricted to proprietary computers. PDAs, kiosks, Internet cafes, airport terminals and home computers have equal capabilities.

## High-Quality VOIP

PBX capabilities for routing, voicemail, auto-attendant, directories and more – at a fraction of the price of standard systems.

## Instant Messaging

Our Instant Messaging systems (Jabber) allow for internal private networks to work independent of external systems.

## PDA

Considered in every component of our technology.

**No Downtime. No VPN. No Windows. No Worries.**
